This report, based on [] photography, supplements NPIC/R-97/64, 1/ pertaining to the Ukmerge MRBM Complex, which previously consisted of 2 Type I MRBM launch sites and 1 fixed field launch site (Figure 1).

Fixed Field Site No 2 is situated in a forested area of approximately 450 feet elevation and is located 9.5 nautical miles (nm) east-southeast of Ukmerge over a loose-surfaced, secondary road network. The field site is 14.5 nm (straight line distance) northeast of Vepriai Launch Site; 12 nm (straight line distance) east-northeast of Ukmerge Launch Site; and 11.9 nm (straight line distance) northeast of Fixed Field Site No 1.

The field site was first seen [] when it was identified as being complete. When seen [] the site consisted of 2 confirmed launch

positions and 2 probable launch positions (Figure 2). All 4 positions are linear aligned on an azimuth of approximately 220 degrees. Several small clearings are inter-connected with the 4 positions by numerous roads and trails, some poorly defined. The field site has remained in generally the same configuration, with no major changes []

The field site can be negated [] Two clearings were present within the field site area [] however, it is considered that they were not then missile related. These clearings could be seen [] and cannot be negated, because of lack of prior coverage.

The rail-to-road transfer point for this field site probably is located in Ukmerge.
